# barSTOCK™ myBar Trader App / Staff App - Work-Flow

## TraderApp

### Categories of Branding

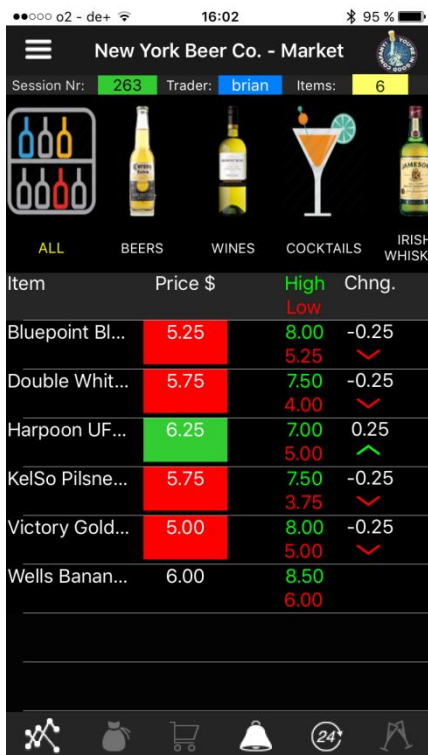

We have 4 levels of Branding for the TraderApp.

1. Standard App with barSTOCK Branding and site selection.
2. Standard App with Customer Branding and site selection.
3. Customized App with Customer Branding locked to one site
4. Customized App with Customer Branding locked to a group of sites.

### Item Ordering via App

Item order is placed via Trader App. Order lands in the Portfolio Tab of App.

Victory Golden is now in the Portfolio.

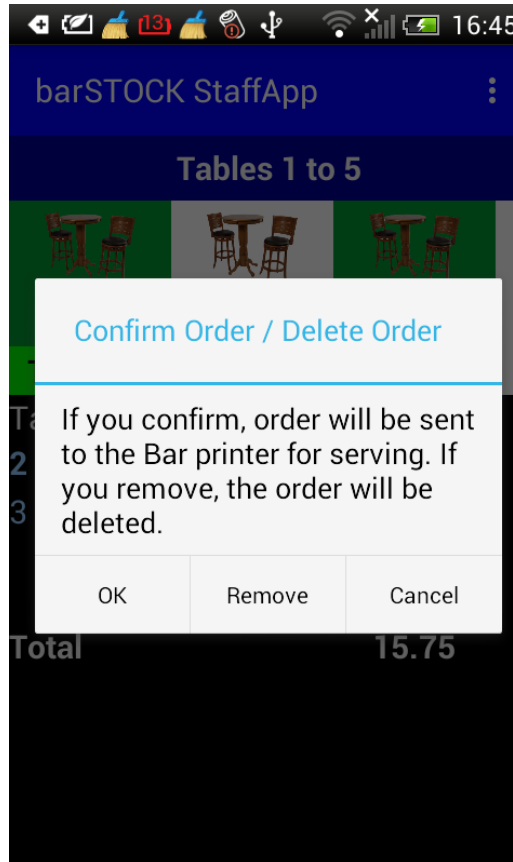

Trader now calls a Waiter across to his table.

# barSTOCK™ myBar Trader App / Staff App - Work-Flow

## StaffApp

The StaffApps are organised per Table. 1 to 5, 6-10, 11-15, 16-20. Each one has a security code.

When an order arrives for that Table the App will vibrate and StaffApp will see the order listed.

The moment the Staff presses the green tick button the order will be confirmed and sent to the next processing stage.

The order will disappear from the Staff App and from the Trader Portfolio view.

## Backend Printer Process

On a Windows PC back office there is a program running from barSTOCK with WEB access.

The program automatically logs into the barSTOCK™ myBar platform and picks up the order(s) to be printed and prints them out on a local receipt printer. The Example from above is shown below:

This receipt is used to enter the order into the POS system.
